

Our Consultancy Services

Our UK consultancy services are tailored to suit each organisation's requirements. We have helped dozens of organisations large and small to save money year on year. We keep our rates low to ensure that those that need support can access it.

We subsidise costs for third sector clients with income from private and public sector work. We take on work in all areas of sustainable development and natural resource efficiency from strategy and policy to practical action.

For every 4 days consultancy provided at full rate
we gift 1 day free to the 3rd sector.

- **Low carbon investment programmes**
- **Whole community strategy development**
- **Sustainable procurement**
- **Sustainable development training**

If you have a carbon, environment or sustainability related project, please contact us. If we cannot help we will know someone who can.

We work with the Public Sector

We are working with Nottinghamshire Healthcare NHS Trust's (NHT) procurement department developing a framework of sustainable procurement policies. This not only promotes local economic growth, it has saved the NHS money and carbon through a more sustainable procurement system. **Over the last 5 years we have worked with 30 public sector organisations with turnovers exceeding £1 billion.**

“We value environmental management in our supply chain. Investors in the Environment offers support and a recognised standard to help us ensure that we do not disadvantage our small and medium sized suppliers.”

John Williams, Head of Procurement, Nottinghamshire Healthcare NHS Trust

We work with Small Organisations

Over the last year we have worked with more than 100 organisations.

We have worked with 2BM, a local small business providing data server solutions, to assist with their ISO14001 accreditation over the last 3 years. As part of this work, NEPes has produced a full carbon analysis of the entire business and assisted in creating action plans moving forward.

““NEPes have really helped us to understand the impact we, as a company have on the environment and just as importantly how we reduce this and improve our energy efficiency.” 2BM
